

GKN Premium Propshafts

Exclusively from GKN:
complete propshafts with
OEM quality in the IAM

OE or replacement shaft from GKN? This makes no difference!

Strength, stiffness, precision balance and low mass are the essential properties of propshafts in ensuring durability and minimum levels of Noise Vibration Harshness (NVH). Shaft joints and couplings also have to accommodate severe service loads, high angles and apparent changes in path length, due to relative displacement between axles and the gearbox in passenger cars, and the high 'shock' loads commonplace in all-terrain vehicles.

GKN Driveline's unique capability and innovative lead in crash optimised shafts ensures a safer and more comfortable driving experience.

An extensive product range

Our product range includes applications for all well-known manufacturers in all vehicle categories, from mini-SUVs to the commercial light-duty segment.

In TecDoc, GKN propshafts are allocated to approx. 22 million vehicles.

No compromises

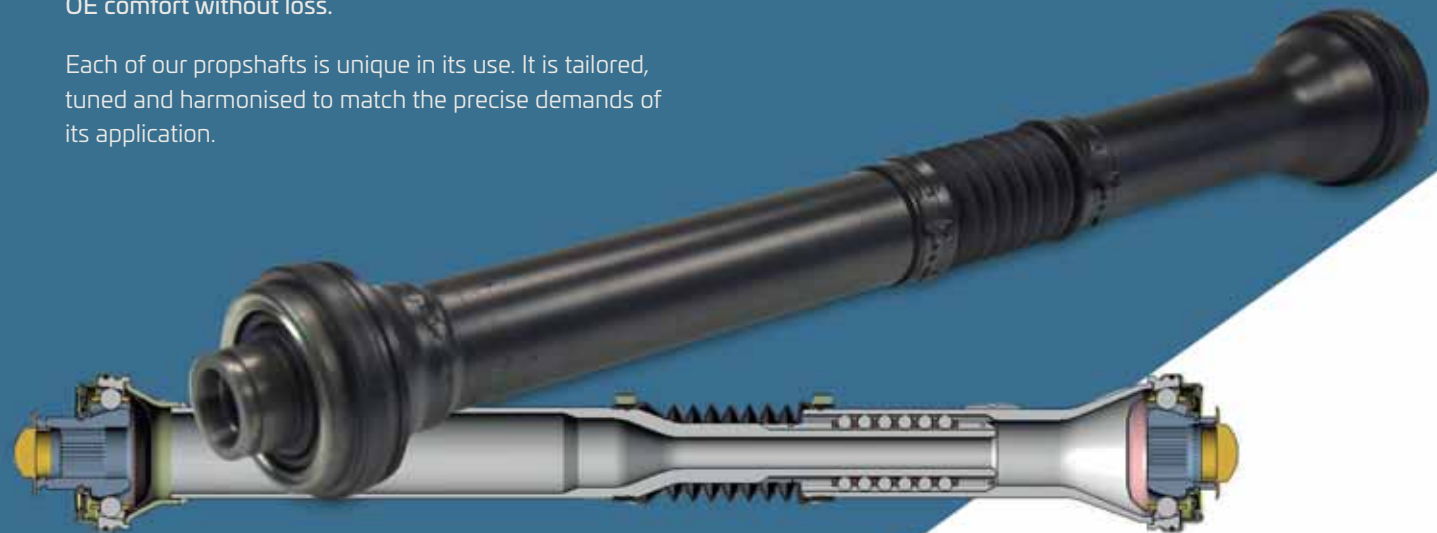

Each GKN replacement propshaft provides the familiar OE comfort without loss.

Each of our propshafts is unique in its use. It is tailored, tuned and harmonised to match the precise demands of its application.

- > GKN is OEM supplier of propshafts
- > GKN is the only supplier of complete propshafts with OEM quality in the Independent Aftermarket

Latest technology

- > One, two and three piece configurations
- > Range of fixed ball joints, plunging ball joints and tripod CV joints
- > High precision balancing capability
