### Key features

- > One, two and three piece configurations
- > Range of fixed ball joints, plunging ball joints and tripod CV joints
- > Latest GKN joint technology
- > High precision balancing capability
- > High and low angle solutions

## > LÖBRO premium propshafts

Each LÖBRO propshaft is unique in its use. It is tailored, tuned and harmonised to match the precise demands of its application. Replacement propshafts are available for a wide range of SUV's, AWD and light commercial vehicles.

## > Each propshaft – a unique, engineered product

Strength, stiffness, precision balance and low mass are the essential properties of propshafts in ensuring durability and minimum levels of Noise Vibration Harshness (NVH).

Shaft joints and couplings also have to accommodate severe service loads, high angles and apparent changes in path length, due to relative displacement between axles and the gearbox in passenger cars, and the high 'shock' loads commonplace in all-terrain vehicles.

GKN Driveline's unique capability and innovative lead in crash optimised shafts ensures a safer and more comfortable driving experience.

## > New in our range

We are continuously extending our product range.
