Key features

> One, two and three piece configurations

> Range of fixed ball joints, plunging ball joints and tripod CV joints

> Latest GKN joint technology

> High precision balancing capability

> High and low angle solutions

GKN

SPIDAN premium propshafts

Each SPIDAN propshaft is unique in its use.
It is tailored, tuned and harmonised to match
the precise demands of its application.
Replacement propshafts are available
for a wide range of SUV´s, AWD and light
commercial vehicles.

Each propshaft – a unique, engineered product

Strength, stiffness, precision balance and low mass are the essential properties of propshafts
in ensuring durability and minimum levels of Noise Vibration Harshness (NVH).
Shaft joints and couplings also have to accomodate severe service loads, high angles
and apparent changes in path length, due to relative displacement between axles and
the gearbox in passenger cars, and the high 'shock' loads commonplace in all-terrain
vehicles.
GKN Driveline's unique capability and innovative lead in crash optimised shafts
ensures a safer and more comfortable driving experience.
